

40mm Machine Gun Optical Day Sight

Ring Sight WC-30

Description

The Ring Sight WC-30 is an optical day sight specifically designed for use with the General Dynamics MK 19 Machine Gun System.

Contains a graduated reticle, 200 to 2000 meters.

Reticle illumination provided by natural light or an attachable, battery-operated LED array (2 AA cell).

Benefits

Quicker target acquisition, greater accuracy than possible with the open sight and results in ammunition savings.

Compatible with night vision goggles.

Simple to use. No special training required.

Easily attached and detached to the MK 19 through the use of the M2 weapons bracket or the General Dynamics Ring Sight bracket.

A reliable, robust, sealed optical sight with no moving parts.

Requires very little maintenance.

Operation

Gunner determines the range to the target, selects the range mark in the sight, overlays that mark on the target and fires.

Corrections are accomplished through burst-on-target technique.
